

Jenkins Configuration as Code

We will look at how Jenkins is deployed at Ouranos.

Ouranos is using Jenkins to run automated nightly integration tests on our PAVICS platform. The tests are actually regular Jupyter notebooks so we achieve two goals at once:

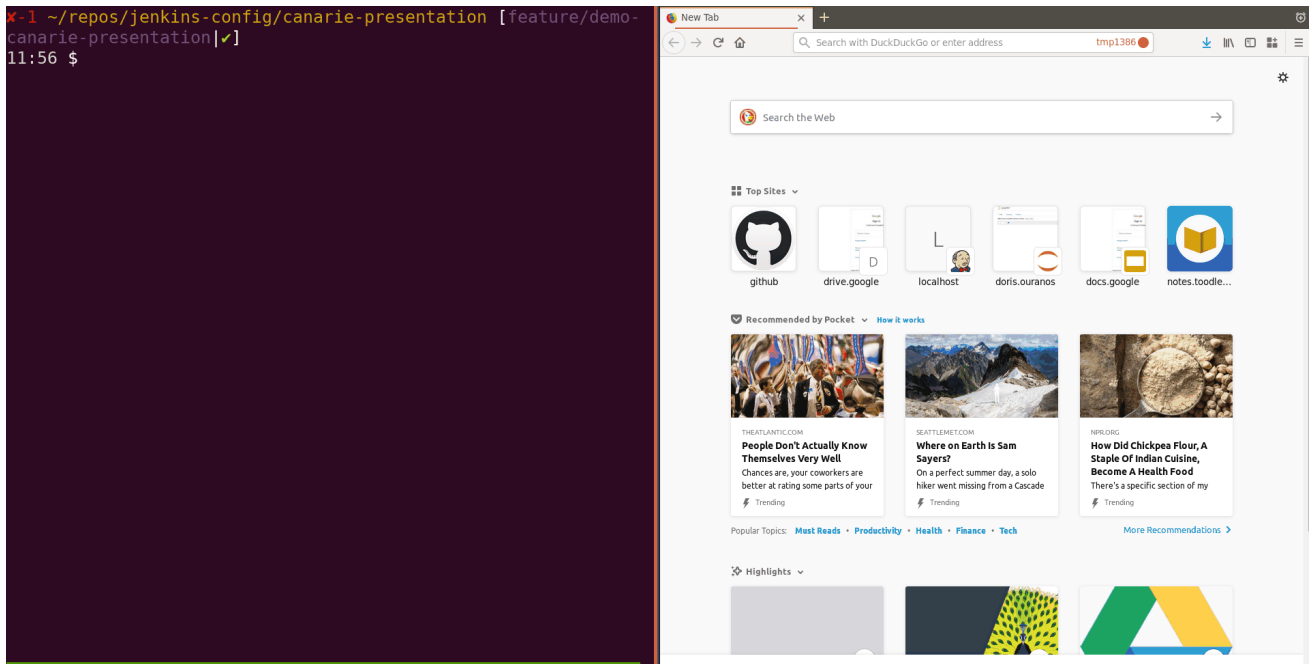

- Tutorials notebooks
- Integration tests

This presentation and all the code used can be found at <https://github.com/Ouranosinc/jenkins-config/tree/master/canarie-presentation> (<https://github.com/Ouranosinc/jenkins-config/tree/master/canarie-presentation>).

By Long Vu, software developer at Ouranos.

Presentation at the Canadian Research Software Conference, May 28, 2019.

Jenkins without Configuration as Code plugin

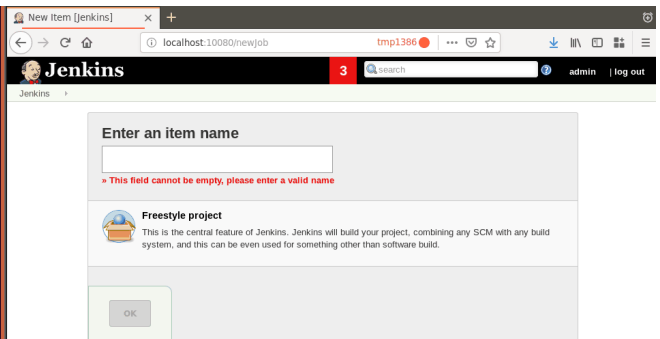

- No automated configuration sync between Production and Staging instances
- Very time consuming to manually reconfigure a fresh instance to replicate exactly the same configurations
- No tracking who changed which config, when, why

Jenkins using Configuration as Code plugin

```
+ docker volume create jenkins0_home
jenkins0_home
+ docker run --name jenkins0 --detach --hostname jenkins0 -p 1
0080:8080 -v jenkins0_home:/var/jenkins_home jenkins/jenkins:l
ts
334975cacf051e1062f3c47a99764df451e31fc8f2071207983e2f0c01c34a
5b
+ sleep 10
+ docker exec jenkins0 bash -c echo admin_pass=`cat $JENKINS_H
OME/secrets/initialAdminPassword`
admin_pass=b395571520f24a1ea231c762dd26d861
+ set +x
curl http://localhost:10080 to test

Have to install each plugins manually.
Have to set each config manually. :(
Have to configure each job manually !

```

- Fixes all the previous problems
- Fits the DevOPS way of "Infrastructure as Code"
