1. **Purpose**

A fundamental requirement of Participants in the Canadian Access Federation is that they assert authoritative and accurate identity attributes to resources being accessed, and that Participants receiving an attribute assertion protect it and respect privacy constraints placed on it by the asserting Participant.

**To accomplish this practice, CANARIE requires** Participants to make available to all other Participants answers to the questions below.

1.1 **Canadian Access Federation Requirement**

Currently, the community of trust is based on “best effort” and transparency of practice. Each Participant documents, for other Participants, their identity and access management practices, which they can confidently meet. Each Participant should make available to other Participants basic information about their identity management system and resource access management systems registered for use within the Canadian Access Federation. The information would include how supported identity attributes are defined and how attributes are consumed by services.

1.2 **Publication**

Your responses to these questions must be:

1. submitted to CANARIE to be posted on the CANARIE website; and
2. posted in a readily accessible place on your web site.

You must maintain an up-to-date Trust Assertion Document.
2. Canadian Access Federation Participant Information

2.1.1. Organization name: __Langara College_____________________________________

2.1.2. Information below is accurate as of this date: __August 27, 2014 ________________

2.2 Identity Management and/or Privacy information

2.2.1. Where can other Canadian Access Federation Participants find additional information about your identity management practices and/or privacy policy regarding personal information?

__In development__________________________________________________________

2.3 Contact information

2.3.1. Please list person(s) or office who can answer questions about the Participant's identity management system or resource access management policy or practice.

Name: __Justin Yau________________________________________________________

Title or role: __Director, IT Operations________________________________________

Email address: __jyau@langara.bc.ca________________________________________

Telephone: __604-323-5973__________________________________________________
3. Identity Provider Information

Two criteria for trustworthy attribute assertions by Identity Providers are: (1) that the identity management system be accountable to the organization’s executive or business management, and (2) the system for issuing end-user credentials (e.g., userids/passwords, authentication tokens, etc.) has in place appropriate risk management measures (e.g. security practices, change management controls, audit trails, accountability, etc.).

3.1 Community

3.1.1. As an Identity Provider, how do you define the set of people who are eligible to receive an electronic identity? If exceptions to this definition are allowed, who must approve such an exception?

____ Students and Employees

3.1.2. What subset of persons registered in your identity management system would you identify as a “Participant” in SAML identity assertions to CAF Service Providers?

____ Students and Employees

3.2 Electronic Identity Credentials

3.2.1. Please describe, in general terms, the administrative process used to establish an electronic identity that results in a record for that person being created in your electronic identity database? Please identify the office(s) of record for this purpose.

____ Current Employees and Registered Students

3.2.2. What authentication technologies are used for your electronic identity credentials (e.g., Kerberos, userID/password, PKI, ...) that are relevant to Canadian Access Federation activities? If more than one type of electronic credential is issued, how is it determined who receives which type? If multiple credentials are linked, how is this managed (e.g., anyone with a Kerberos credential also can acquire a PKI token) and audited?

____ Kerberos, UserID/Password soon PKI

3.2.3. If your electronic identity credentials require the use of a secret password or PIN, and there are circumstances in which that secret would be transmitted across a network without being protected by encryption (e.g., “clear text passwords” are used when accessing campus services), please identify who in your organization can discuss with any other Participant concerns that this might raise for them:

____ CIO and IT Director level

3.2.4. If you support a “single sign-on” (SSO) or similar campus-wide system to allow a single user authentication action to serve multiple applications, and you will make use of this to authenticate people for CAF Service Providers, please describe the key security aspects of your SSO system including whether session timeouts are enforced by the system,
whether user-initiated session termination is supported, and how use with “public access sites” is protected.

___We do not have campus wide SSO yet_______________________________________________

3.2.5. Are your primary electronic identifiers for people, such as “NetID,” eduPersonPrincipalName, or eduPersonTargetedID considered to be unique for all time to the individual to whom they are assigned? If not, what is your policy for re-assignment and what is the interval between such reuse?

___Yes it is unique for all time._____________________________________________________

3.3 Electronic Identity Database

3.3.1. How is information in your electronic identity database acquired and updated? Are specific offices designated by your administration to perform this function? Are individuals allowed to update their own information on-line?

___HR and Registrar’s Office. Individuals are not allowed to update their information___

3.3.2. What information in this database is considered “public information” and would be provided to any interested party?

___None________________________________________________________________________

3.4 Uses of Your Electronic Identity Credential System

3.4.1. Please identify typical classes of applications for which your electronic identity credentials are used within your own organization.

___Web Services, Computer Login, Email, Wireless____________________________________

3.5 Attribute Assertions

Attributes are the information data elements in an attribute assertion you might make to another Canadian Access Federation Participant concerning the identity of a person in your identity management system.

3.5.1. Please describe the reliability of your identity provider attribute assertions? ___As accurate as entered___________________________________________

3.5.2. Would you consider your attribute assertions to be reliable enough to:

   a) control access to on-line information databases licensed to your organization?
      Yes
      No
b) be used to purchase goods or services for your organization?
   Yes
   No

c) enable access to personal information such as student record information?
   Yes
   No

3.6 Privacy Policy

   Canadian Access Federation Participants must respect the legal and organizational privacy constraints on attribute information provided by other Participants and use it only for its intended purposes.

3.6.1. What restrictions do you place on the use of attribute information that you might provide to other Canadian Access Federation participants?

   Langara is governed by the B.C. Freedom of Information and Protection of Privacy Act in its collection, use, access, storage, disclosure and retention of personal information as it is defined in the Act. The main provision relating to use is that the College must use the personal information for the purpose the information was obtained or compiled or for a use consistent with that purpose. The College must notify individuals at the time the College collects their personal information how the information will be used and, if applicable, disclosed.

3.6.2. What policies govern the use of attribute information that you might release to other Canadian Access Federation participants?

   The College has an older policy, the Access to Information Policy, which governs the use of attribute information and conforms to the provisions of the B.C. Freedom of Information and Protection of Privacy Act relating to the collection, use and disclosure of personal information. Langara has a Privacy, Access and Security Policy and corresponding procedures in draft form that are not yet in effect. Once approved later this year, the new policy and procedures will supersede the Access to Information policy and procedures.

3.6.3. Please provide your privacy policy URL.

   The URL for the Access to Information Policy is: http://www.langara.bc.ca/about-langara/administration/pdf/B5001.pdf
4. Service Provider Information

Service Providers, who receive attribute assertions from another Participant, shall respect the other Participant's policies, rules, and standards regarding the protection and use of that data. Such information must be used only for the purposes for which it was provided.

Service Providers are trusted to ask for only the information necessary to make an appropriate access control decision, and to not misuse information provided to them by Identity Providers. Service Providers must describe the basis on which access to resources is managed and their practices with respect to attribute information they receive from other Participants.

4.1 Attributes

4.1.1. What attribute information about an individual do you require in order to manage access to resources you make available to other Participants? Describe separately for each service application that you offer to CAF participants.

_ We are not a SP but only an IDP_________________________________________

4.1.2. What use do you make of attribute information that you receive in addition to basic access control decisions?

_ We are not a SP but only an IDP_________________________________________

4.1.3. Do you use attributes to provide a persistent user experience across multiple sessions?

_ We are not a SP but only an IDP_________________________________________

4.1.4. Do you aggregate session access records or record specific information accessed based on attribute information.

_ We are not a SP but only an IDP_________________________________________

4.1.5. Do you make attribute information available to other services you provide or to partner organizations?

_ We are not a SP but only an IDP_________________________________________

4.2 Technical Controls

4.2.1. What human and technical controls are in place on access to and use of attribute information that might refer to only one specific person (i.e., personally identifiable information)? For example, is this information encrypted for storage in your system?

Only limited amount of users have access to information. Information are logged in our system.

4.2.2. Describe the human and technical controls that are in place on the management of super-user and other privileged accounts that might have the authority to grant access to personally identifiable information?
This is currently a work in progress. Only a handful of users have super-user privileges. Systems are logged as well.

4.2.3. If personally identifiable information is compromised, what actions do you take to notify potentially affected individuals?

The College follows the guidelines for dealing with Privacy Breaches provided by B.C.’s Office of the Information and Privacy Commissioner. We would evaluate the risk to individuals associated with the breach by determining the type, sensitivity and/or amount of the personal information associated with each individual, what use could the information be put to and what is the context of the information. We would identify the cause and extent of the breach and the type and number of individuals affected by the breach. Based on our analysis of the breach and taking into consideration several factors we would determine whether to notify affected individuals of a breach. The aim of notification would be to avoid or mitigate harm to the individuals. We would directly contact the affected individuals as soon as possible following the breach by letter or email or potentially by phone or in person unless delay is recommended by law enforcement authorities.
5. Other Information

5.1 Technical Standards, Versions and Interoperability

5.1.1. Identify the SAML products you are using. If you are using the open source Internet2 Shibboleth products identify the release that you are using.

__ADFS_______________________________________________________________

5.1.2. What operating systems are the implementations on?

__Windows Server 2008 R2_______________________________________________

5.1.3. What versions of the SAML protocol (1.1 or 2.0) do you support in your implementations.

SAML 1.1

SAML 2.0

5.2 Other Considerations

5.2.1. Are there any other considerations or information that you wish to make known to other Canadian Access Federation Participants with whom you might interoperate? For example, are there concerns about the use of clear text passwords or responsibilities in case of a security breach involving identity information you may have provided?

__Not at this time______________________________________________________
