

Pilot: building a research data ecosystem

We believe in creating sustainable data ecosystems that deepen our understanding of human health and disease

How do you create a sustainable ecosystem?

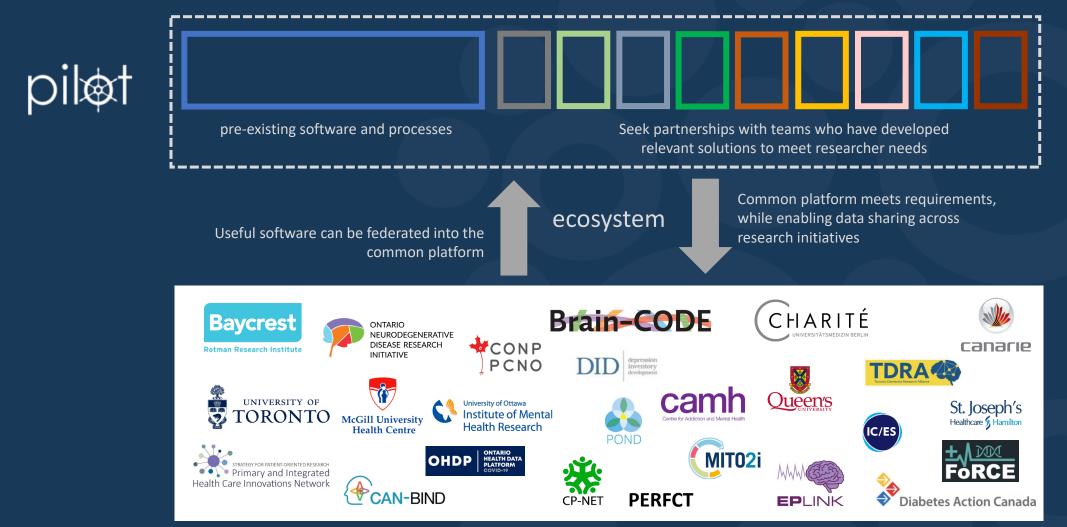

It's hard and takes time

Government and academic funding isn't particularly wellsuited for it, but what if that was all you could use?

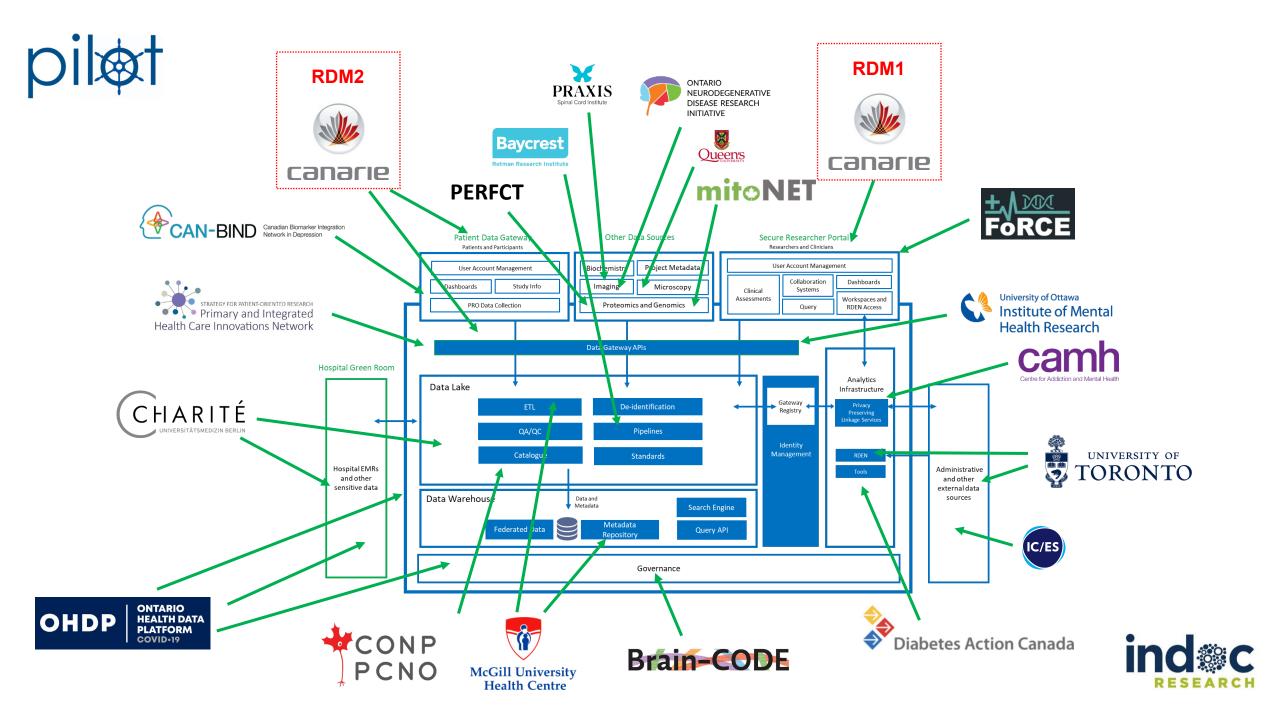

The approach you take is to build incrementally towards the bigger and long-term vision

Indoc Ecosystem Development Model

Contributing projects

Project	Website	Contribution to Pilot
OHDP ONTARIO HEALTH DATA PLATFORM COVID-19	ohdp.ca	 Secure safe haven analytics environment, enabling collaborative analysis of PHI Platform privacy and security policies and procedures to support research using PHI
VRE Virtual Research Environment	bihealth.org/en/translation/network/di gital-medicine/bihcharite-virtual- research-environment/	Hospital-oriented data platformGDPR readiness
Brain-CODE	braincode.ca	 Data capture and primary data management systems and capabilities Multi-modal data federation Data governance and associated policies related to consented research data Data release and sharing mechanisms
HealthDataCloud Human Brain Project	healthdatacloud.eu	 Secure data architecture and environment Enables pan-European sensitive data sharing across 15 research institutions and organizations
ŴНG	science.canarie.ca/res/189	 Patient and study participant engagement interface Integration with non-traditional data sources

Pilot's code is available under AGPL and can be found at github.com/PilotDataPlatform/

If you've got a research data need, we'd love to explore a collaboration – reach out to us at **info@indocresearch.org**
